FUTURE PLAST INDUSTRIES manufactures PET Preforms and HDPE / PP Closures using world class equipment's from HUSKY and SACMI. It has a combined capacity to process 32,000 MT of polymers per annum and has a 16,000 sqm covered ware housing facility to store both Raw Materials and Finished Goods.

The facility is a FSCC 22000 certified with a very well-equipped in-house laboratory for testing incoming Raw Materials and end products complying to all required standards.

FUTURE PLUS is an extension to **FUTURE PLAST** with similar equipment from HUSKY to manufacture PET Preforms and is FSCC 22000 certified. Capacity of the plant is limited to process 7,200 MT with plans to expand to 11,000 MT and as well to equip the facility with Closure production lines. Products are being sold within KSA and as well exported to GCC countries.

ENPI GROUP was established in 1995, as a manufacturer of packaging and plastic materials. Ever since, the company has followed a successful growth strategy that created today's large regional diversified packaging player. All Business Units are among the leaders of their industries.

A continuous expansion into new technologies has made **ENPI GROUP** the regional pioneer in many fields of its activities. Therefore the packaging solutions offered in paper and plastic are world class. Our customers, including the high-end multinational brand owners, appreciate our state of the art technologies, continuous investment in new production facilities and our vast industry experience.

SUSTAINABILITY

FUTURE PLAST / PLUS play an important part in the food and beverage supply chain, whilst at the same time fulfilling our role as valuable members of the communities that we serve.

An example is our contribution to the development of the first transparent bio-degradable PLA (Polylactic Acid) water bottle produced in the Middle East made from 100 percent plant-based polymers.

FUTURE PLAST Industries is one of the first company in the middle east to initiate the light weighting exercise and have introduced 29/25 tooling's in the year 2011, wherein the Neck weight reduction of 1.5 grams was achieve as compare to traditional 30/25 High neck Preform design. Then as part of the company's continuous commitment to sustainability thru down gauging, the company introduced the Flat neck Preform for Tear-lid off Bottles,

wherein a typical package of Preforms for 200 ml water weighing 8.0 to 9.0 grams plus a plastic closure of 1.2 to 1.5 grams (so total of 9.2 to 10.5 grams) is alternatively replaced with 6.38 grams without the need of Plastic enclosure and replaced by aluminum lid instead. This weight reduction not only reduce the carbon foot print because of the reduction of energy used to produce it (lesser weight and therefore with lesser cycle time and hence more output) and the CO2 used in transport (because of lesser weight and geometry, the qty is more per shipment), but since the weight reduction translates into using fewer resources, and therefore being more sustainable.

Above developments has been carried out together with HUSKY & BOSCH. We are in discussions with KHS - Germany and SMI - Italy for supporting us with higher output rotary combi lines to provide sustainable solutions to our potential customers with flat neck preforms.

QUALITY & ENVIRONMENT

The entire facility is FSSC 22000 version 4.1 certified and has a very well-equipped in-house laboratory to ensure all products are manufactured to meet industry standards (a scheme that is recognized by the Global Food Safety Initiative (GFSI)). This recognition demonstrates highest standards globally, leading to international food industry acceptance. Its in-house quality control department conducts tests as per the technical parameters outlined by BS and ASTM standards.

Equipment is in place to check the incoming raw materials, as well the finished products. Random sampling / testing is done for every batch manufactured and recorded in order for a certificate of compliance to be issued with each shipment.

FUTURE PLAST / PLUS is committed to environmentally friendly practices in both the manufacturing process and the waste disposal of substrates. Annually Future Plast in going under stringent environmental emissions, indoor air quality and noise monitoring/testing process to ensure its compliance against UAE Federal law no. (24) of 1999 – Protection and development of the environment, Applicable Decrees and OSHAD Code of practice 3.0 - Occupational Noise.

FUTURE PLAST / PLUS closely monitors its adherence to environmental standards, taking into account energy efficiency, waste disposal and working conditions.

CUSTOMER FOCUS

Since the products are exported worldwide to more than 20 countries, **FUTURE PLAST / PLUS** employs highly qualified multilingual professionals to ensure efficient production translates into cost effective high quality products and unparalleled customer care. We provide technical assistance to its customers such as process intervention, trouble shooting, blowing process optimization, new product development, light weighting, proto typing and customization.

All decisions and changes within **FUTURE PLAST / PLUS** are made with the customer in mind. Constant interactivity with customers means our multi-lingual and experienced team knows what our customers need and when they need it, and are trained to give excellent customer service at all stages of the client relationship. They act as the primary point of contact between the client and the internal teams who are involved with designing and manufacturing the products on order.
